

Prorsum Group Holdings Limited (PGHL) would like to demonstrate our One-Stop-Shop Sourcing and Logistics service model by the following case study:

Stage 1

A Canadian client who mainly manufacture woodturning products approached us by providing their own technical drawings for the woodturning tools with metal fabrication. They hoped these tools could be made in factory in Mainland China and requested us to find suitable manufacturer. Meanwhile, they also would like to source and purchase other commodities / premiums including key rings, letter opener, shoe horn, pill box, tape measure, etc.

Stage 2

We got back to them by identifying a right manufacturer specified in producing tailor-made metal product from our pre-qualified vendors list. Also we selected some premium producers and requested them to provide quotations of different premiums.

Stage 3

We came up with prototype for client verification and arranged a site visit for the client to the manufacturer's factory in order to achieve on-site discussion for modification and technical specification of woodturning tools. Moreover, we guided them to a list of premium companies to take a look of their product samples. Client found that it's very efficient and cost saving that we have done many ground work.

Stage 4

The prototype was confirmed for mass production. And the clients decided to place order to purchase premiums produced by several manufacturers.

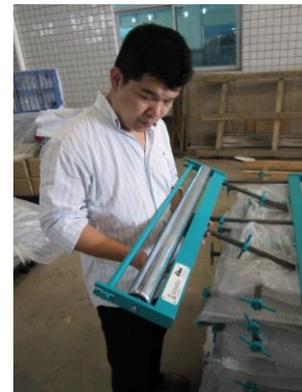

Stage 5

We established and kept monitor to the production schedules for different products. By the way, we provided professional advice on cargo weight and volume, selection of container type and estimation on departure and arrival time for shipment. To maintain the client's biggest benefit, we negotiated the best freight rate with several ocean liners.

Stage 6

We had to visit manufacturers' factories to conduct production and cargo inspections. With seamless communication with our client, we let them know the production progress by video conferencing and / or sending relevant photos along the way to make sure the product qualities are under control.

Stage 7

We helped to pick up all of the cargoes from various vendors in multiple locations by deploying our cross-border trucks to deliver from factories in Mainland China to our logistics centre in Hong Kong. In order to maintain cargo security, we consolidated all cargoes in our warehouse facility in Hong Kong, also provided value-added services such as pick and pack, re-labeling with client's logo and marks, and placing "Made-in-China" stickers in all items for compliance with Canadian import customs clearance. To enhance operation efficiency, we reserved a shipping slot in peak season to make sure on-time cargo delivery.

Stage 8

We kept our clients be informed along the way for cargo status. Finally, they are happy to receive the cargoes on time and appreciated to find all of the commodities and packing are in good quality.

It proves that the Global Supply Chain Management service offerings from Prorsum Group help out overseas buyers / importers as their off-shore working partner to provide one-stop-shop services from sourcing to purchase, from logistics to customs clearance in cost-effective and efficient manner.
